# Trompeta Renaissance D

Producto nº

119

The renaissance trumpet is based on an early German style instrument in the Germanisches National Museum Nürnberg and was developed with the assistance leading expert in historic brass. The trumpet is not assembled with a modern sold but with beeswax a traditional technique which produces a rigid structure yet one that can be easily adjusted or repaired should the need arise. Ornamental angel heads adorn the bell but decoration generally has been kept to a minimum. The trumpet plays at modern pitch D, but crooks are available to lower the pitch by a semitone and a whole tone and of cthisse a tone and a half when used together. A vent hole can be provided for use with each pitch.

Everything you need to build a Renaissance trumpet is supplied ready for assembly. Tubing, ferrules, embellishment, formed bell and a traditional mouthpiece all drawn, spun machined from solid brass. Assembled using beeswax only (soldering is required if fitting vent tubes, slide clamp and/or angel head decorations).
