Piragua CHESAPEAKE

Producto nº

512

When the ocean turns nasty is right at home. The expedition kayaks feature ultra-volume bows for big-wave performance.

These kayaks are expedition tthising boats that excel in rough water and steep sea. With their high-volume bows, these kayaks cruise over big waves. Their highly cambered foredecks shed water quickly and provide plenty of foot room for comfortable cockpits. The skeg-like stern design assures train-like tracking and minimal weathercocking, even in fierce crosswinds.

It's easy to lean and turn, handles following seas confidently, and surfs beautiful. The long waterline and substantial rocker assure plenty of speed---you'll leave the plastic boats behind---while the high-volume hulls swallow up expedition size loa

They are built to endure a lifetime of serious expedition tthising, with 4mm okour plywood hulls and decks and fiberglass sheathing on both hull and deck. 6mm watertight bulkheads are standard, as are hatches, deck rigging, adjustable footbraces, and a comfortable seat. Epoxy end-ptthiss at the bow and stern simplif construction and provide extra impact strength.

It is offered in three sizes

Chesapeake Triple

Kit completo

Length: 21', Beam: 30", Depth: 14", Weight: 68 lbs.

Ref.: 84 - 512 - 2465

PVP 1 397,53 €

Chesapeake Double

Kit completo

The success of the proven Chesapeake hull shape led quickly to demands for similar tandem and three-person designs. The Chesapeake Double and Triple are high-volume touring boats, with a 700lb payload that belies their surprising speed. The high bow will carry you over all but the worst chop, while the deep stern ensures confident tracking in strong crosswinds, even with a light load. These are substantial boats for serious expeditions. They are comfortable day-trippers for families or couples.

As in the other Chesapeake variants, the Double and Triple are built solidly, with epoxy and fiberglass on the inside, outside and deck of the 4mm okoume hull. For safety, watertight bulkheads are standard.

The Double offers the back-country paddler voluminous storage and the speed to cover 35 miles in a day. The cockpits are deep and snug, with the standard Rapid Pulse backbands offering excellent lumbar support, while the cambered deck affords plenty of paddle clearance.

While the Chesapeake Triple can accommodate three adults, we have found over the years that most paddlers will use the center cockpit for children or pets, or for light gear stowage with a cockpit cover snapped in place. The Triple is not suitable for paddling single-handed, although many builders will choose to mount a CLC SailRig to convert the Triple into a fast and efficient cruiser.

Chesapeake Double and Triple kits include: Plans, instructions, pre-cut parts, hatches and bulkheads, full deck rigging, Keepers™ adjustable footbraces (two pairs), epoxy kit, fiberglass for hull and deck, tractor seats, and backbands.

Length: 21', Beam: 30", Depth: 14", Weight: 65 lbs.

Chesapeake 18 Kit

Kit completo

Includes Hatches and Bulkheads

Length: 18', Beam: 24-1/2", Weight: 46 lbs.

The Chesapeake 18 was intended for large-statured paddlers who don't want to have to endure barge-like handling. Even with a 6'5", 270 lbs. paddler aboard, the Chesapeake 18 offers speed, nimble turning, and good gear-carrying ability.

Chesapeake 14 Kit**Kit completo**

A handsome, good-handling kayak for paddlers under 130 lbs.

Chesapeake kayaks are expedition touring boats that excel in rough water and steep seas. With their high-volume bows, the Chesapeakes cruise over big waves. Their highly cambered foredecks shed water quickly and provide plenty of foot room for comfortable cockpits. The skeg-like stern design assures train-like tracking and minimal weathercocking, even in fierce crosswinds.

It's easy to lean and turn, handles following seas confidently, and surfs beautifully. The long waterline and substantial rocker assure plenty of speed---you'll leave the plastic boats behind---while the high-volume hulls swallow up expedition size loads.

Chesapeakes are built to endure a lifetime of serious expedition touring, with 4mm okoume plywood hulls and decks and fiberglass sheathing on both hull and deck. 6mm watertight bulkheads are standard, as are hatches, deck rigging, adjustable footbraces, and a comfortable seat. Epoxy end-pours at the bow and stern simplify construction and provide extra impact strength. The cockpit, with our trademark one-piece keyhole coaming rim, is roomy and easy to pad out for a custom fit.

The Chesapeake 14 is small but handsome and capable. Excellent tracking, sweet handling, good stability, and easy construction are all features of the 14. She is ideal for small women and children.

All Chesapeake kits include: Plans, instructions, pre-cut parts, hatches and bulkheads, full deck rigging, Keepers™ adjustable footbraces, epoxy kit, fiberglass for hull and deck, tractor seat, and backband.

Piragua Patuxent

Producto nº

516

The 19. 5 is not just the fastest kit kayak available; it's one of the world's fastest kayaks, period. The 17. 5-foot Patuxent is perfect for lighter paddlers.

Built in huge numbers, the designs were marked by very high speeds and light weight. Being somewhat tender, they were not intended for first-time paddlers, as they were a favorite of kayak racers all over the world.

Kits are out of production, and the plans are out of print.

Piragua Round Bottoms

Producto nº

518

The round-bottom kayaks are built using the compounded plywood method. The hull panels are bent into a U-shape, then pulled together at the bow and stern. This is a bit more challenging than the hard chine building technique, but still within the capability of many first time builders.

Are available only as plans.

Piragua Tasman Sea

Producto nº

456

The 180 pound displacement is suitable for day paddling or for smaller paddlers on weekend trips.

Scaling down a larger boat is rarely successful, so this Kayak has its own distinct shape. Wider, cheekier, and with less deadwood aft, it is considerably more lively than others. A high prismatic coefficient is appropriate in such a small boat, and it can be paddled at speed/length ratios in excess of 1.5 by a strong recreational paddler.

Stability is high and the boat can be rolled until the cockpit is awash yet still right itself, which gives the paddler a sense of security. All this in a neat little boat for people who paddle just for fun.

(13'6") (GV)
Overall Length 13'6"
Waterline Length 12'11-1/2"
Max. Beam 25"
Displacement 180 lbs.
